

Depositit Receives Thumbs Up From Computing Which? For The Second Year In A Row

In November 2004 Computing Which? carried out tests on behalf of one of their readers to discover the most secure and simple methods available for backing up computer files. Their results concluded Depositit's online data backup service to be their solution of choice and one year later they have recommended Depositit again.

Which? is the highly respected consumer rights organisation that amongst many things independently reviews products and services in order to protect consumers and their rights.

In 2004 Computing Which? reviewed a number of online data backup companies and selected Depositit as their first choice in automatically safe guarding computer files. Recently they produced an Easy Use PC Guide, which once again highlights Depositit as the solution to use.

The Easy Use PC Guide provides advice on day to day requirements of using a computer, from setting it up to protecting the information created on it and within the section on Protecting Your PC, the importance of backing up was highlighted with choices available to back up manually using external hardware or media devices or to use an automated online solution, whereby Depositit was suggested.

“This is great news,” said Anthony Ryb, Marketing Director for Depositit. “As we rely on our computers more and more, the importance of making regular backup copies of our files is more important than ever. To have Which? highlight this and suggest Depositit's online backup as the easy option is very encouraging”.

In the original review Computing Which? evaluated online backup solutions after a reader wrote in asking for their recommendation on the most simple and secure way of backing up and storing computer files off-site. The reader had experienced a computer crash and lost important information, so was keen to put in place a solution that would prevent this from occurring again.

Computing Which? advised using an online data backup solution as they felt these offered the quickest and easiest way of carrying out backups, especially when used with a broadband connection. Such services work by automatically transferring selected files over a secure Internet connection and storing them safely in secure data centres, where the information is instantly available for retrieval at any time in the case of an emergency.

They found Depositit's registration and installation process quick and easy to carry out, and felt the backup and restore process was very simple too. In addition to ease of use, Depositit's prices were very reasonable.
